

Please leave XM radio alone and reject the NAB's petition 04-160. It's a valuable service provided to many Americans who choose to subscribe. We bought the service for the many channels it provides. I definitely can't get this type of quality programming from any other source in this city, state, or country. I've had XM satellite for about 2 months now and it's one of the best investments I've ever made. I could understand if this service was free of charge and available to everyone. But it's not!! Who gives anyone the right to dictate what XM should & will broadcast if we're paying for these services? I'm truly satisfied with all the programming and services XM provides. I strongly urge you as a government agency to support and defend XM's ability to provide these outstanding services. This is consumer choice (my choice) and is totally protected under the First Amendment!!
